

PAULI

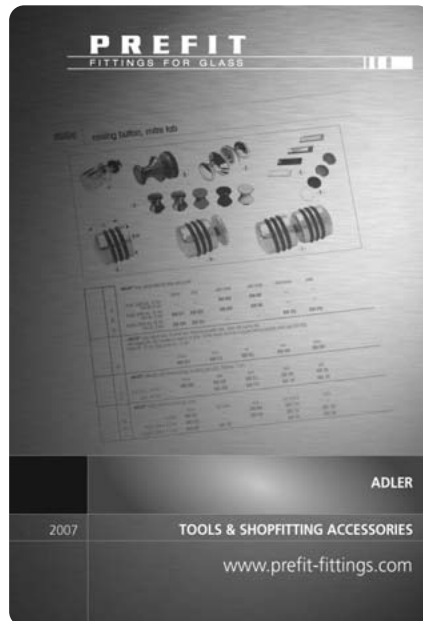

Prefit has now launched their 840 page, 2007 edition of the LITTLE BIG BOOK.

This invaluable guide to all the fittings available from Pauli has been updated to include a large amount of new products, with technical details on each range.

At present the LITTLE BIG BOOK is only available in book form, but shortly it will be available on our web site.

To request a catalogue please contact Prefit.

ADLER

Available on the Prefit web site is the new revised 2007 Adler Catalogue.

The new edition contains many of Adler's original best selling products, along with a variety of new fittings which complement the complete and extensive range.

Along side this is the Adler 2007 price list, for easy reference on all the products in the catalogue.

SEALS

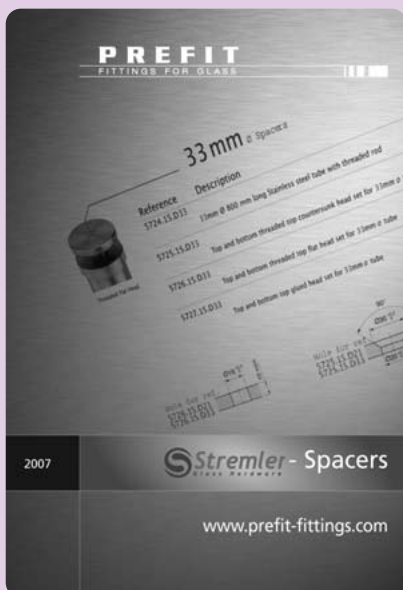

Shower seals are now an important part of any glass shower enclosure.

Prefit have now recognised this with a new range of translucent seals.

The new range offers the ability to cover wide gaps with extended wiper blades, and includes seals to fit doors with minimal tolerances that have already been installed.

The new range gives the flexibility to cover nearly all eventualities. The new seals can be viewed on the Prefit web site.

STAND OFF

The new Stremler Spacer System has been designed to give total flexibility.

The fittings consist of a central stainless steel tube and threaded rod, 300mm long for 21mm diameter tube and 800mm long for 33mm diameter tube, these can be cut to the desired length.

To this are added the relevant glass fittings, either flat top, countersunk or UV glueable.

Each design is supplied with a bottom plate that can either be screwed or bolted to a timber base.

Downloadable literature is available from the Prefit web site.

ROLER TRACKS

Prefit have supplied roller tracks for small sliding doors for many years, in a variety of styles and finishes.

For the first time there is now a dedicated catalogue for those very easy to install systems.

There is also a price list included on the web site for your ease of use.
